

ABSTRACT

A method of annotating an electronic document on a computer system
5 comprising on a first computer system, receiving an electronic document, such
as a web page, with at least one key element, consisting, for example of one or
more words, recognizing the key element in the document, determining the
position of the key element in the document, determining an identifier for the key
element from a key list, annotating the document with data corresponding to the
10 identifier, presenting the annotated document to a user so that the user may
select the annotated key element, and retrieve data or information related to the
key element.
